Summary

In the scope of research through my non-profits, Positive Vibrations Ministries and The Homeless Council, there is an identified coupling between the economic, social and political aspects of our communities' relationships and interactions. Understanding this pressure helps to resolve it. Politics is dependent upon the social context, who gives them their authority. The social context is built around the economic context. In order to positively affect the political, the social needs to change from a change in the economic context. The objective is to introduce a new market to kick off these transformations.

The introduction of an electronic component to phones, which measures and reports one's esteem to currently co-located or previously encountered folks, allows each of us to send esteem tickets or treats to each other, even if this is with someone from an hour ago. Judicial proceedings would result in a judicial ticket. This esteem level, for the individual, is matched by organizational esteem, including racial categorization such that the Black, the Mexican and the American Native, for example, would receive organizational esteem, given past offenses to that community, and all members of that community would benefit. In this way, organizational esteem would measure the worth of businesses and schools. The activity of an esteem market would look much like an ant colony that emits pheromones to find food, though here we would be sending bullets of love, between and among us.

A predictive innovative investment market will be established at the macro level, so we have explained our intentions in the economic sphere, at the micro and macro levels. In the social context, at the micro level, veteran owned and operated shelters will be established, while the macro level will see an international non-profit association of Localities to influence this sphere. In the political realm, a city council of 9, one from each clan, will be pursued, while the macro level will see increasing court cases questioning constitutionality as well as efforts to pass several amendments.

So the concrete objectives are, in priority order:

- In every neighborhood, a homeless shelter (3 per block or so)
- RabbitPhone component to interact with esteem
- Application support for esteem banking
- Veteran owned and operated homeless shelters
- International association of Localities participating in the Hubb Clubb
- Send probation and parolees to college, instead of drowning them in papers: 2 years free community college

Overview

Five activities will be engaged by the non-profit. First, elicit support from neighborhood organizations to change federal law to allow capital or durable donations, including housing of homeless, to be a real tax deduction, not a gross modification. For every dollar spent in capital donations, one dollar drops off the tax, not the taxable amount. The individual is deciding how to the entitlement money, and his and her decision takes precedence over the bureaucracy. Then buy or accept property to establish veteran owned and operated shelters, a shelter in every neighborhood, on best behavior.

Next, a two prong effort on the economic front. The establishment of a new innovative donation investment market, with membership in the Clubb by the donors, will address the macro-economic space. The micro-economic space will be addressed through the detection and influence of esteem using RabbitPhones.

Fourth, the establishment of a homeless veteran owned and operated shelters, to train teams of leaders to open new shelters and develop homeless who want to expend effort to develop. Policy is determined by the house council and may allow drinking and drug use, as long as behavior standards are met. Don't Cause a Problem and Always be Helpful.

Finally, the objective will be to get involved politically to encourage adoption of the new market, both macro and micro, in local government, as well as change local policies to be more conducive, including amendments.

Board

9 Clans

Taking a page from [Cherokee Clan Lore](#) and the basis of their stable nation, which was smaller than Denver, is to divide society into 9 clans, though Cherokee had 7; 9 allows for a veto override. Everyone belongs to a clan, but even family members could be in different clans. The potential to switch clans must exist.

In a New Locality, each clan leader would sit on the council.

The nine clans would be:

- 1 - Spiritual
- 2 - Labor
- 3 - Engineering
- 4 - Medical
- 5 - Education
- 6 - Transportation
- 7 - Music and the Arts
- 8 - Civic
- 9 - Research

Market

The various shelters and day centers constitute the network of services, the market, for those of us who have very little and have difficulty getting employed. None the less, what a superb bunch of folks, living and struggling out here in Egypt, manage to look forward to a new day. We just have difficulty getting some stability through housing and a job. Yet, it is evident that we are punished for it. It is not necessarily any particular individual who tries to punish, though they do exist, but the system as a whole produces indigents, crime, trash (vis a vis pollution), addiction, violence and a whole host of mental illnesses, rooted in deep seated trust issues with the world, earned those issues are.

To change this instability, in the small scale, an ancillary market of donations should be formed that allows for the investment to encourage innovation, which addresses both the small scale and the large scale of economics. The way to draw people into a market is to enable a sense of membership. To this end, participants in the Hubb Clubb, who donate, are automatically members of the Clubb with access to the market. As they have established some esteem through their donations and contributions, they can receive from the donation market. Some donors can donate, then receive, then distribute, so that's 3 chances to receive esteem for member organizations.

Though there is cooperation to getting folks into overflow mats, in the 3 main free shelters, in downtown Denver, there could be so much more. If programs were established among the shelters to share in development, addressing the largest portion, by far of the homeless, who drink some and do some drugs, but maintain themselves, then the 3 shelters could be different program levels, for initial triage.

The first priority objective is to work with community and neighborhood organizations, as well

as the city, to build an esteem system and see if each block be able to house 7 homeless, for tax breaks. The federal government should consider that a capital donation and the money spend comes off the top of the taxes, not the taxable amount. Consider, if you made \$200,000/yr, your adjusted gross came to \$121,000, tax to \$31,000. Yet you brought a couple of homeless men to share a spare basement bedroom, who you had vetted. You could charge them \$500/each a month, or \$6,000 each, per year. If Congress passes a law allowing it, or you do it anyways, and argue the taxation in court, if you still pay taxes, then your tax would be reduced by \$12,000, and you would only need to pay the federal government \$19,000 in tax. The same would apply to corporations and organizations who own homeless developmental properties, perhaps co-located. If every neighborhood had a homeless shelter...

Another option is to have the state legislature adopt the entire income tax liability, from all Colorado residents: landholder, indigent, transient and immigrant, and then write the debt off and wipe the slate clean; burn the diskpacks.

The introduction of esteem RabbitPhones will enable the microeconomic market to measure esteem of participants. This is the crucial next step to building a network that monitors itself. The esteem issued, immediately or later, can be positive (treats) or negative (tickets). Furthermore, the issuance of esteem can be done privately, unless it is a judicial ticket. One can always redeem themselves, after having been horrible. There should also be a grandfather clause on punishments, for a limited time, to give the context a chance to be helpful to the individual; they may stop committing crime.

In the new model, the principle of locality is a part of the socio-political-economy, where micro donation economics of esteem are coupled with the locality's political expression and activity, and community oriented social structures. This is Main Street and Community associations, as well as the City Council.

1. Economic: Main Street, retail market
2. Social: community associations
3. Political: City Council

At the macro level of economics, we combine with regional and national and international community, a higher level organization than the locality political association. This is Wall Street. Social divisions are firmly economic.

- I. Economic: Wall Street, investment market
- II. Social: national association councils
- III. Political: National/State Governments issuing policies and regulating

Having linked solutions at both levels of scope synthesizes positive feedback and responsiveness. The macro level investments will provide impetus to form, logistical, wholesale donation graphs.

This new non-profit, the Hubb Clubb, therefore, aims to modify the local economic market context to shift the local social context, thereby influencing changes in the local political context. This will serve as an example.

This can only occur if the national and state governments stop taking the taxation, then returning it with their policy explicit in its detail. The point is that beyond reporting of operational information about how taxation is spent, they use regulatory power to apply control. Claims they must protect against fraud and mismanagement are misplaced. It is the Locality that reserves regulatory power, not the national and state governments.

Yet it is obvious that globalization means Localities are connected and wholesale goods flow between them. Here is the point of entry into making a change in the system and so in a way to not disrupt the system. Were a new commodities market to be established that governed predictive aggregate donation network flows, with esteem and a variety of goods flowing

backwards, up the supply and service and asset chains, the macro level economics could change. This introduction of an auxiliary and ancillary macro market would have 2 predictable effects.

The first on the local barter and borrow markets of the participating Localities, which would include all the donors with all these goods. There would be an increasing flow of participation, potentially, as esteem flowed up and out of the transaction. Local economic context changes, with the adoption of esteem, result in local social and political context changes.

These micro donations would then feed the predictive investment market with concrete interactions within the donation network, enabling the macroeconomic level. At the same time, the change in the microeconomic interactions of some of one's activities, causes changes to occur in the social and political realms.

Regarding the political, the use of esteem RabbitPhones allows for innovative solutions to immigration and the racial divide. Using esteem, everyone can differentiate those of other communities, without condemning the entire community and a composite electronic citizenship and visa program could be implemented. Different communities, oppressed in years by, get organizational esteem to provide reparations. Some of these protected classes are Black, Hispanic, Asian, American Native, Homosexual and so forth, as well as Felons. This targets macrosocial and macropolitical aspirations.

The second affect would be in generating a new partition of national association councils as the political context changes from the introduction of a new national association council. These two objectives are tied together.

The new national association council is the organization that ties Localities participating in the macro and micro markets.

It is clear that changing the form of measurement to esteem allows a truer determination of character in interactions.

Macro donation predictions and Micro donation cycles in 24 dimensional market

Regarding the equation:

$$\iiiii \left| : \left(\frac{(LD(e\vec{t}_1)\delta et_1 + RD(e\vec{t}_2)\delta et_2 + N(e\vec{t}_3)\delta et_3)}{\delta L_{n=16}^{\vec{1}8} \delta L_{n=19}^{\vec{2}1} \delta L_{n=22}^{\vec{2}4}} \right) \right.$$

$$\delta \vec{L}_1^3 = \frac{1}{2} m_n \left(\frac{e_n}{t_n} \right)^2 + \Psi(e_n, t_n)$$

$$\iiiii \left(\begin{array}{c} \left[\begin{array}{ccc} LD(e\vec{t}_1) & 0 & 0 \\ 0 & RD(e\vec{t}_2) & 0 \\ 0 & 0 & N(e\vec{t}_3) \end{array} \right] \\ : \left[\begin{array}{ccc} \frac{1}{2} m_A \left(\frac{e_{16}}{t_{16}} \right)^2 + \Psi(e_{16}, t_{16}) & 0 & 0 \\ 0 & \frac{1}{2} m_A \left(\frac{e_{19}}{t_{19}} \right)^2 + \Psi(e_{19}, t_{19}) & 0 \\ 0 & 0 & \frac{1}{2} m_A \left(\frac{e_{22}}{t_{22}} \right)^2 + \Psi(e_{22}, t_{22}) \end{array} \right] \end{array} \right)$$

The reason the terms in the numerator are summed, while the terms in the denominator are a product, is to promote 3 party cycles of micro-donations by having a market value the contributions in terms of how they feed the macro potential needs expressed. The macro is decoupled, while the micro rewards establishing micro trade graphs. This allows multiple instances of the above equation to address the needs, such that disjoint trade graphs could mutually participate in meeting need. This would change the definition and impact of "cornering the market".

The meta-space operator, the line with three dots, induces a different mathematical meaning for the expression using division. The concept and symbol of division in meta-spaces is the off plane elements of a vatrix. Therefore, imagine that the numerator is the root plane, or a 3-D matrix: 3 x 3. The denominator is the non-root plane of a vatrix, itself a matrix. So we have a 3 MetaDimension (3MD) vatrix, which is 3D x 3D x 2D.

Main Street and Wall Street: Retail market versus Investment market

The preceding equation makes clear the coupling, yet separation, between Main Street and Wall Street. Main Street is the Retail market and in the scope of donations, they are the micro donations, governed by an ebay/craigslist hybrid: barter system with locality mapping and logistics. Wall Street is the Investment market and in the scope of donations, they measure the potential needs and wholesale logistics, as well as idea investment and research. Not all micro donations need feed any investment, but may be extracted with pattern matching.

Economic thoughts

by Shumpeter, Sombart, Reinert, H & E. Nietzsche Creative Destruction in Economics

http://www.researchgate.net/publication/226027214_Creative_Destruction_in_Economics_Nietzsche_Sombart_Schumpeter

RabbitPhone

The development and introduction of the RabbitPhone compatible phone to detect and influence esteem will create the market for interactions using the esteem, in the Locality.

Products

Shelters

There is plenty of room in the market for a decentralized, localized, small-scale shelter solution. The key will be marketing to receive donations for this purpose. Development programs are central. Stability with shelter and storage are critical, for all homeless. Potential access to all of Maslow's hierarchy of needs is a natural right. We must be able to govern ourselves. Through biometric authentication, esteem may be kept, and good behaving travelers could be accommodated, in month to month housing.

Residential Organizations

Homeowners

Quadplex shelters for Sixteen

Of the 16 residents, 2 per bedroom in 8 bedrooms, 9 are candidate residents, while 7 are transient, probationary residents. The 9 split into 3 teams of 3, one team per apartment, leaving one apartment. Divide the 7 into 1 team of 3 and 4 singles. The team of 3 probies runs the 4th apartment and the 4 singles are in initial training. The team of 3 probies in is initial team training. The 9 are a council and run the house: 5 majority and 6 veto override.

If the Homeless Union had workers comp and underwriting for lines of credit, we could contract with local buildings for a clean, looked after space for the indigent, as well as facility maintenance and donation points for the esteem market; provide a database of skills; contract longer term work; go to donate - go to get what you need <couple of smokes>, <Orange Juice>, <Boots>, <Jacket>. Education and development from a changed mental model will be profound. The team of 9, in teams of three, would rotate through a logistics day, and education day and a work day.

Need a capabilities system to support a financial esteem market

It would be preferable to have hardware support for capabilities, so there is no doubts. This would take a bit of capitalization, so I am requesting donations, err, investment, for this objective, please contact me. Here is a discussion of the IBM OS/400 operating system: <http://c2.com/cgi/wiki?IseriesArchitecture> which enables features such as described here, regarding segregation: <http://cap-lore.com/CapThewwory/Segregate.html>

RabbitPhone

A unexplored amount is needed to develop a new phone, with the ability to setup a cloud-based esteem account for the phone user, as well as allow detection and influence of others' esteem.

Services

The Forest of SocioPoliticalEconomy Trees

Old Ancient Knowledge from long ago has materialized in the Mind of the Family that 3 3 layer Trees of emanation of mental organization establishes the SocialPoliticalEconomy we each experience in One of 2 ways, or is there a third way?

Tree of Trade: MONEY <- TRADE <- MARKET

Tree of Policy: SECURITY <- POLICY <- LAW

Tree of Giving: RESPECT <- GIVING <- RECEIVING

THE SPE META TREE: MARKET, LAW, RECEIVING

Unlock by changing the Imputation of Trade from Money to Esteem, which has more affinity to the Principle of the Giving Tree.

Felon Teaming

Those of us who may have made hard, selfish decisions that may be legislated as criminal, decide within an environment of abuse, influenced by leaders and teachers of a false advice, a false prophecy. As one develops in life, in experience, realizations of a better prophecy results in men of character, who have the knowledge of their previous experience combined with their heart of righteousness. They are men of respect, aware of how they extend respect and able to clearly establish boundaries as they extend respect, earning more respect. Their subsequent being extends the combination of their skill and their knowledge, through their respect. Likewise, there are those who should never escape. The Family knows, trust Us. No more papers on felons and no more "get a single felony and you are out." That's bullshit, especially when the legality is at odds with the morality. See Henry David Thoreau's Civil Disobedience.

Brothers and Sisters, Our time is Now.

Self-regulation in the Legalized Drug Market

There have been reports of psychotic behavior resulting from over-consumption of edible THC.

How to prevent abuse in a problem faced by the consumption of alcohol, as well. State regulatory power avoids assigning responsibility to the participants, particularly in self-regulatory capacity. Short of banning edibles and alcohol, the only solution is self-regulation. Out of my eating 7 edibles, around 50 mg each, one experience resulted in being blasted for 4 hours and feeling very unstable. This was a bad dose we hear about. It is rare and a quality control problem. Rather than government regulators, self-regulate. Through esteem flow, the user, the distributor and the producer would ensure product quality and the self-control of the user. The distributor can decide who is ready for what, just like a bartender.

Organization

Individual and organizational esteem

Esteem is held by both individuals as well as organizations. The esteem of the individual is influenced by the associations they belong to. Likewise, the esteem of the organization is influenced by the individuals who are a part of the aggregation. In fact, the organization is the sum of its individuals' esteem, divided among all their organizations. The individual's esteem is the sum of the parts of the organizations.

There are separate political and identity organizations, by which congress will determine the initial esteem to be divided among the constituents.

Trinity of Trinities

Establish a squad of nine and break this into 3 teams of 3. Conduct operations with trinities.

Operations

All three objectives have operations. Open-source programmers may be a source of effort to implement the applications. Relationships and deals will need to be made to specify, prototype and build the RabbitPhone. Donation funds or properties will be needed to establish veteran owned and operated shelters. Decentralized localities, under the auspices of the national association council, will build grassroots political organizations to impact the politics of the larger locality.

Financials

Quadplex shelters for Sixteen

Take \$77,000/year, purchase/lease a Quadplex of 2 bedroom apartments. \$5000/mo or \$60000/year for the lease, leaves \$17000/year, or \$1416/mo or \$354/apt/mo for supplies/repair. Per resident, \$312.50/mo rent and \$88.50/mo in supplies, is \$401.00/mo/person. This is a large reduction in the current cost of homelessness. This allows innovative facility management to the residents.

Donation Applications for Micro and Macro interactions

An unexplored amount is needed to develop a couple of internet, mobile applications, as well as the server-side to back the application. An application and device support for influenced and detecting esteem will need to be developed.

RabbitPhone

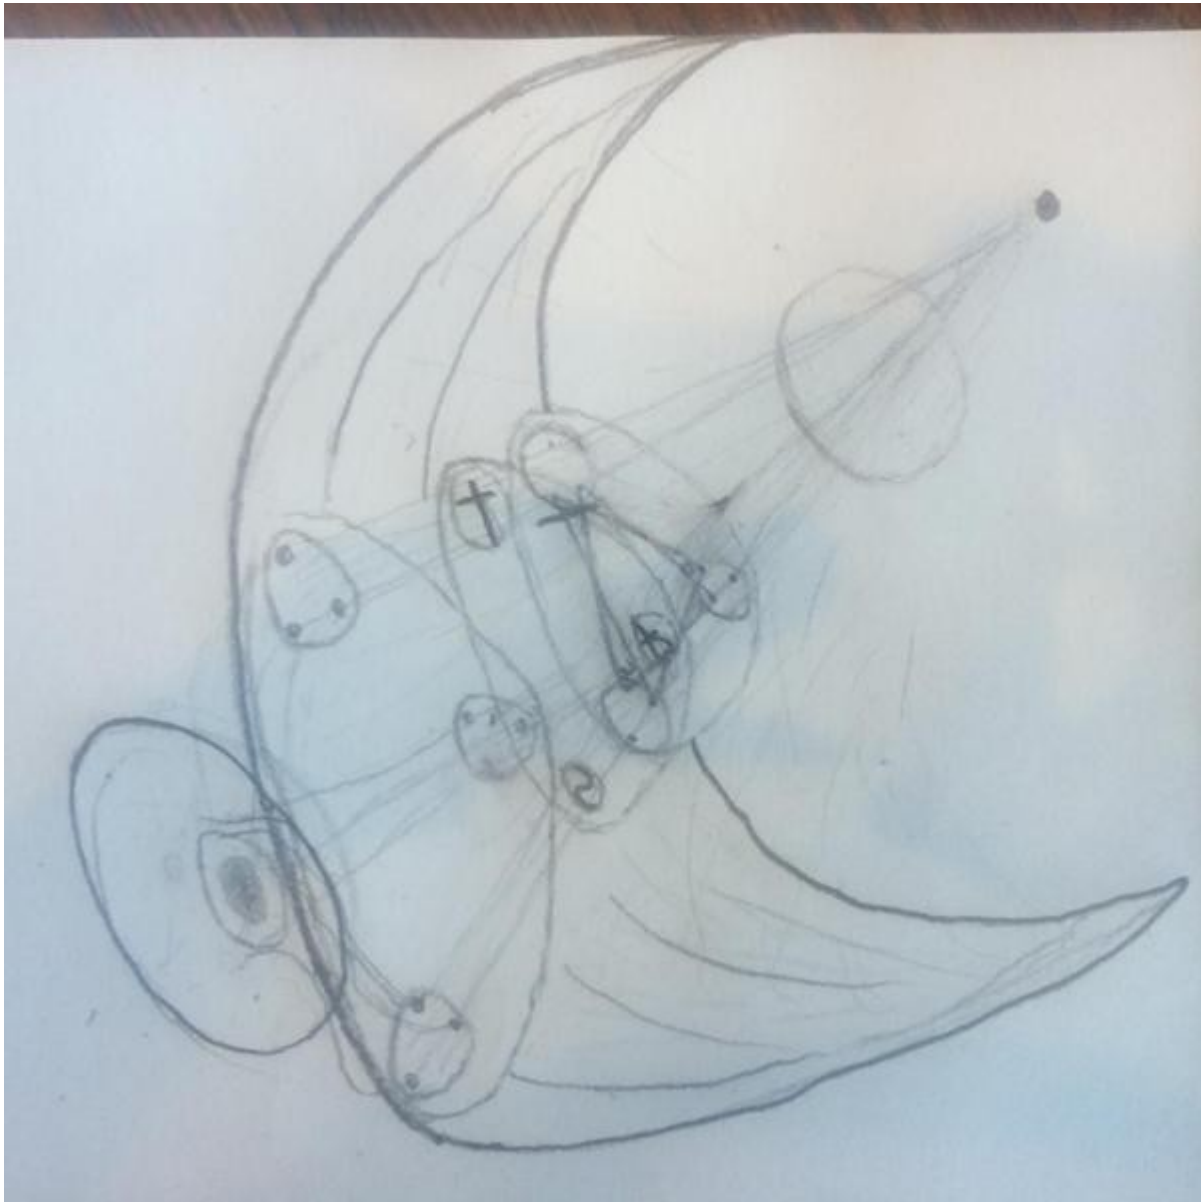

An unexplored amount is needed to develop a new phone to detect, broadcast and influence esteem.

Conclusions

In pursuing 3 core objectives and linking them, a concerted effort to affect the local socio-political-economy of a candidate city or region can result in wonderful potential for changing the context of homelessness and the working poor. This model would promote unlimited social mobility.

The first objective, a predictive donation market with RabbitPhones and love bullets, addresses the economic space. The second objective, veteran owned and operated shelters, addresses the social space. The third objective, getting the market in broader use and reducing policy abuse, addresses the political space.
